

Little Labs

CLEAR AND PUNCHY
FLEXIBLE AUDIO INTERFACE

THE MULTI Z PROFESSIONAL INSTRUMENT PRE-AMPLIFIER / RE-AMPLIFIER / DIRECT BOX

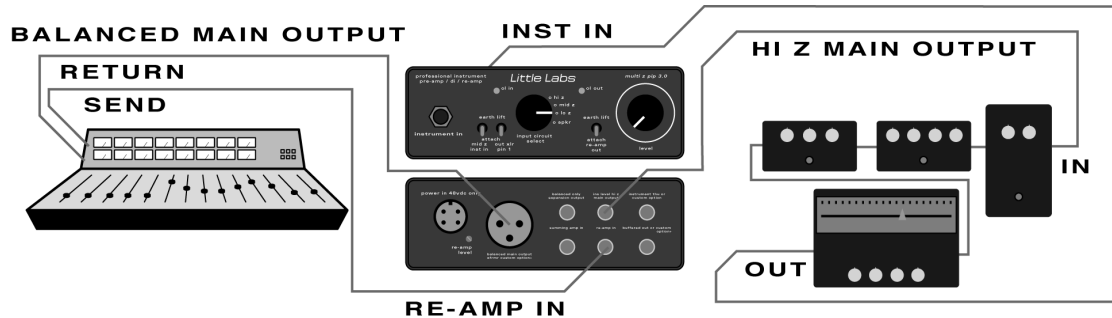

THE MULTI Z PIP CONTAINS:

- Classic multi z source impedance optimized active DI circuitry
- Separate on-board re-amplifier
- Allows simultaneous re-amping and gain make up for vintage effect interfacing on a console insert
- Summing inputs (3 extra inputs)
- Instrument pick up emulation transformer and line level transformer isolated outputs
- Pre transformers insert (use pro gear before your guitar amp)

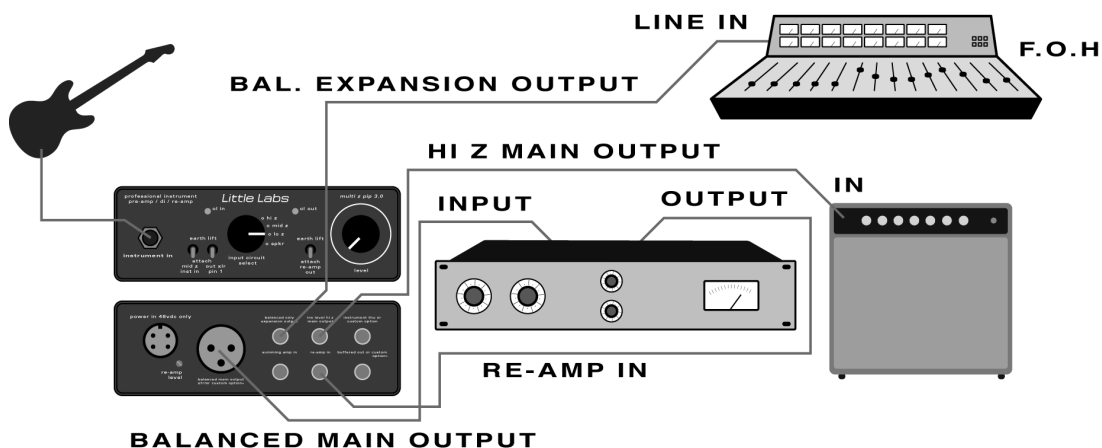

The Multi Z PIP 3.0 is a completely updated, refined replacement for the now classic Little Labs Multi Z Direct Box. Little Labs added so many features to the original Multi Z Direct Box, we couldn't call it just a direct box anymore. Every custom mod that was asked of Little Labs over the past ten years, of which there were many, has been incorporated into the new, but still compact, Multi Z PIP. Use it as a super instrument pre-amp, use it as a re-amp, use it as a DI, use it as a mini instrument mixer, use it all together at once...The Multi Z PIP is all about flexibility and superior sonics.

"The Multi Z, makes the instrument jump out at you, in front of the speaker in a natural yet three dimensional way, truly outstanding." TCHAD BLAKE
